

EnviroCentre Limited Environmental Policy

EnviroCentre is committed to promoting sustainability through provision of a professional environmental consultancy service.

EnviroCentre strives to provide effective environmental management and research services that facilitate sustainable business practice across our three core business areas: Development Services, Catchment Management and Resource and Sustainability.

By providing advice and information to our clients on new technologies and applications that help solve environmental problems, EnviroCentre plays an active role in supporting and encouraging clients in reducing their environmental impact.

We are committed to reducing our own environmental impact by developing our Environmental Management System (EMS) to meet the requirements of the International Standard: ISO 14001: 2004; this will be achieved by implementing the following key measures:

- Comply with, and endeavour to exceed, the requirements of all relevant environmental legislation and obligations with particular regard to pollution prevention;
- Establish periodic reviews of environmental aspects associated with company activities;
- Identify and implement a continuous programme of measures to minimise identified environmental aspects; and
- Set targets to achieve our objectives embedded within our ***environmental improvement plan***;
- Involve all employees in development and implementation of our ***environmental improvement plan***.
